

Windows 10 Upgrade

EasyDent works great with all versions of Windows including Windows 10.

New Computers

If you are buying a new computer it will typically have the latest version of Windows installed.

If you are ordering a computer from a supplier like Dell you can specify the version of windows you would like to have installed on the computer. We recommend you select the Windows 10 "Pro" version when available instead of the "Home" version. The "Pro" version can make networking the computer easier.

Existing Computers

It's up to you if you wish to upgrade an existing computer to Window 10. Some computer hardware like older computers, printers, and scanners may not be compatible. Although it is not required, we would recommend that you do a complete computer backup before upgrading. Also, don't hesitate to contact your hardware support technician to assist you in evaluating if you should upgrade and having them do the upgrade for you.
